

OP-AMPS in the W&L Circuits Lab

Compiled 02 Nov 2018, JE

Generic Op-amps

[TL082](#): Wide bandwidth, dual op-amp, intended for use with dual-supply (e.g. +/- 12V)

[UA 747](#): Dual op-amp, generic

Rail-to-Rail Op-Amps

[TLV 2774](#): high slew rate, rail-to-rail, quad op-amps, supply voltage limited to +5.5V

[TLC2274](#): rail-to-rail quad op-amps

LM Series

[LM 324](#): Quad op-amps, single supply operation (cheap substitute for rail-to-rail, but limited in input and output voltage range)

[LM 348](#): Quad op-amps, generic

[LM 358](#): Low power, dual op-amps, (

[LM 386](#): low voltage audio power amplifier

Instrumentation Amp

[INA126](#): single instrumentation amplifier

[AD623](#): single-supply rail-to-rail operation (expensive component)
