

Updated Project Completion Goals--Engineering Capstone (Engn 379)

Due: Tuesday, 31 Mar 2020, noon

The winter 2020 through us (and the entire world) a massive curveball. The COVID-19 pandemic moved us to a virtual learning environment starting mid-March. Your team may find itself in a good position to continue collaborating with relatively little interruption to your work. Or your team may find itself in a position where it will be challenging to continue your project as originally planned. Either way, let's have a conversation and set realistic goals to finish out Capstone in strong, meaningful, and enjoyable fashion.

To this end, please address the following:

1. List the major milestones your project will achieve by the end of winter term 2020.
2. What (if any) project milestones/goals have changed as a result of the transition to virtual learning? Briefly justify how and why these were altered to accommodate the realities of working in a virtual environment?
3. How does your team plan to stay in regular communication/collaboration? What software/virtual platforms do you plan to use?
4. How can the instructor best support your team's progress? (E.g. would you like to set up a weekly workshop to hash out hardware, software, design issues, review written work, etc.?)
5. Anything else you would like to address, not covered in 1-4 above?
